

PROFESSIONAL SUMMARY

Data Science and AI graduate student with a Bachelors in Information Technology and Data Science, combining technical analytics with leadership and problem-solving skills. Experienced in data analysis, AI/ML evaluation, and cross-functional collaboration, with a proven ability to translate complex research into actionable insights. Driven by curiosity and continuous learning, with a passion for leveraging emerging technologies to drive innovation and value

EDUCATION

Rutgers University - New Brunswick

September 2025-present

- *Master of Business & Science*, Analytics: Data Science and AI | GPA: 3.86/4.0
- *Bachelor of Arts* in Information Technology and Informatics, Minor: Data Science
- Relevant Coursework: Database Warehousing | Data Management | Cloud & Big Data Systems | Data Visualization | Information Security | Object-Oriented Programming | Management of Technology Organizations

SKILLS

- Technical: Python, SQL, R, Tableau, Excel (Pivot Tables, VLOOKUP), MS SQL Server, WinSCP
- Business: Competitive Intelligence, Collaboration, Project Coordination, Leadership & Team Management
- Concepts: Data ETL, Data Analysis, Statistical Analysis, Data Visualization, Machine Learning Fundamentals

WORK EXPERIENCE

Bayer via Rutgers MBS Externship Exchange Program

January 2026-May 2026

Team Lead Analytics Extern, Competitive Intelligence & AI Early Drug Discovery

- Led a cross-functional team of 6 graduate students over a 4-month analytics engagement, owning project execution, coordinating deliverables, and ensuring alignment with objectives
- Evaluated AI/ML models & multi-omics integration strategies in early-stage drug discovery, analyzing industry trends, and competitive positioning across pharmaceutical organizations
- Conducted research-driven analysis of AI-enabled drug discovery platforms to identify emerging methodologies, predictive modeling approaches, and data-driven opportunities within preclinical research pipelines
- Utilized a pharmaceutical R&D analytics platform to explore target discovery insights and support data-driven evaluation of preclinical drug development strategies
- Managed project timelines, coordinated responsibilities, and ensured alignment with research objectives
- Presented weekly findings to Bayer mentors and academic advisors, translating technical research on AI-enabled drug discovery into business-focused insights and strategic recommendations

LeMoyne-Owens College

August 2025-January 2026

Junior Data Analyst

- Maintained ETL workflows to move data between systems while monitoring automated data pipelines
- Analyzed operational datasets in Excel utilizing Pivot Tables, VLOOKUP, and advanced formulas for data accuracy
- Queried and validated datasets using MS SQL Server Management Studio to support data quality checks
- Integrated WinSCP-based SFTP processes to streamline file transfers and support reliable data workflows

PROJECTS

Unitarian Universalist Faith Action NJ via Rutgers MBS Externship Exchange Program

Extern, Database Redesign & Research (<https://1reubent.github.io/uof-webapp/>)

- Collaborated in a 4-member team to design and implement data solutions for New Jersey Attorney General public safety databases
- Designed and implemented normalized SQL database schemas and integrated the backend with the front end to create a fully functional relational database system
- Developed a Python ETL pipeline to extract, clean, and standardize data from the New Jersey Use of Force and Arrive Together public datasets, improving data quality and consistency

NFL Data ETL Project

- Developed a Python-based ETL pipeline to extract, clean, and transform NFL offensive player datasets for quarterback performance analysis, identifying the top 12 quarterbacks by average fantasy points per game
- Visualized performance metrics using Matplotlib, highlighting fantasy points per game for top quarterbacks to generate data-driven insights for fantasy football analysis
